Aug, 13. 1895

Dear Mr. Herring:

I have yours of the second, and [...] I hope to be in Washington on the 31[...], I will say little.

Mr. Huffackers experiments with the whirling cable, and with the [...] surface, should be accompanied with experiments with an actual wing of a buzzard, or other suitable wing, if possible not very greatly differing in size and weight the curved surfaces, used [...] experiments [...] to the main work on the aerodromes, and I should be sorry to have this [...] any work on the [...].

It is not easy to grasp the whole construction of the gyroscope and its different [...] from a drawing, but as far as I can follow this, you seem to have been very successful in getting the [...] I hope you will be able to [...] of the frame and [...] of

[113

gyroscope for a pound and a half, [...] the whole thing, according [...] on the present [...] is a very serious addition to the flying weight.

I hope I shall find [...] ready for flight, and that no more [...] on the rubber [...] (I will only suggest that, as the question [...] about the cord, it might [...] be well to try the special cord made for [...] fishing)

[...] the construction (I mean of the rubber pull aerodrome) was to [...] something, resembling in the general conditions the longer which would sustain tolerably steady flight for right [...] so that these conditions for [...] flight could be [...] of time and labor which [...] cost

with

I am very truly yours
SPLanglely

Mr. AMHerring,
to [...]
