

KILLED BY HIS FLYING MACHINE.

Otto Lilienthal
MUSEUM

BERLIN, Tuesday.

Herr Lilienthal, the inventor of a navigable flying machine, to-day made an experimental journey, starting from Colomberg, in the province of Brandenburg. He had flown along safely for over 200 yards when a gust of wind suddenly caught and carried him upwards, causing him to lose control over his wings. The unfortunate man fell perpendicularly to the ground, broke his spine, and died soon afterwards.
